

ABDUL HASEEB KHOKHAR

Backend Developer | Node.js · Express · PostgreSQL · System Design

Wazirabad, Pakistan | h.khokhar2015@gmail.com | +92 340 2710136 | linkedin.com/in/abdul-haseeb-khokhar | github.com/abdul-haseebkhokhar

SUMMARY

Backend developer and BS Computer Science graduate (University of Gujrat, 2026) who has shipped production-style systems end to end — a multi-tenant analytics SaaS with a Redis-buffered ingestion pipeline behind NGINX on GCP, and a 7-microservice marketplace with distributed JWT auth. Strong in Node.js, Express, PostgreSQL, Prisma, and Redis, with a bias toward layered architecture and deliberate trade-offs.

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST API Design, JWT Auth & Middleware, Zod Validation, Prisma ORM, Mongoose, Background Workers, Transactional Email (Resend)

Databases: PostgreSQL (GROUP BY / DATE_TRUNC aggregation, indexing), MongoDB, Redis (caching, list-based queuing, batch flushing)

Architecture: Modular Monolith, Microservices, Layered Design (Routes → Controller → Service → Repository), Horizontal Scaling & Load Balancing, Worker/Queue Decoupling

DevOps / Tools: Docker, NGINX, Caddy (TLS), Google Cloud Compute Engine, Neon, Upstash, Vercel, Cloudflare DNS, Git, Postman

Languages: JavaScript, TypeScript

Frontend (supporting): React, React Native (Expo), Tailwind CSS / NativeWind, Recharts

PROFESSIONAL EXPERIENCE

Full-Stack Developer Intern (Remote), CodeAlpha 2026

- Built the e-commerce backend: User, Product, Cart, and Order models in MongoDB/Mongoose with JWT auth middleware, role-protected routes, and RESTful controllers for catalog, cart, and orders.
- One of four deliverables (e-commerce, social platform, project management tool, real-time chat) built in a consistent React + Node/Express + MongoDB monorepo.

PROJECTS

StorePulse — Multi-Tenant Web Analytics SaaS *Independent Project · 2026*

Live demo: storepulse-xi.vercel.app | Stack: Node.js, Express, PostgreSQL, Prisma, Redis, Docker, NGINX, React

- Architected a modular-monolith backend (auth, sites, ingest, analytics) on routes → controller → service → repository layering with Prisma/PostgreSQL, including date-bucketed analytics aggregation via SQL GROUP BY; chose a monolith over microservices as no module had independent scaling needs.
- Built a Redis-backed ingest pipeline (LPUSH/LRANGE/LTRIM) that batch-inserts buffered events instead of writing per request, with flushing extracted into a standalone worker — removing a double-write race between load-balanced instances structurally rather than with a distributed lock.
- Scaled the API behind NGINX with Redis-cached API-key lookups, containerized with Docker, and deployed to Google Cloud Compute Engine with Neon, Upstash, and Caddy TLS; enforced Zod v4 validation and Resend email verification using OWASP single-purpose tokens.

Digital Kisan — 7-Microservice Agricultural Marketplace *University FYP · Dec 2025 – Apr 2026*

Repo: github.com/abdul-haseeb-khokhar/DigitalKisan | Stack: Node.js, Express, MongoDB Atlas, JWT, React Native (Expo)

- Designed and built 7 independent microservices — user, listing, order, payment, transport, notify, admin — each with its own MongoDB Atlas database, with centralized JWT auth issued by the user-service and verified via a shared /api/auth/me call.
- Built the farmer-buyer order and bidding flow, a mock JazzCash/Easypaisa escrow payment service, and an InDrive-style transport bidding system; built the React Native (Expo, TypeScript, NativeWind) frontend with role-based theming for four user roles.

Journal Analyst — AI-Powered Trading Journal 2025 – 2026

Live demo: journal-analyst-five.vercel.app | Stack: Node.js, Express, MongoDB, Google OAuth 2.0, JWT, Jest, React

- Built a 3-service backend for logging and analyzing forex trades with Google OAuth 2.0 + local JWT auth and Gemini API-generated coaching insights.
- Debugged real production issues (malformed auth-context payloads, instance-vs-class Mongoose calls); wrote Jest unit tests for user/trade controllers and deployed on Vercel.

EDUCATION

BS Computer Science, University of Gujrat, Hafiz Hayat Nov 2022 – June 2026

Coursework: OOP, Data Structures & Algorithms, Database Systems, Software Project Management
